

Flip-Q Software - USB Flash Drive Option

Thank you for purchasing the Flip-Q USB option. Your software runs off the USB Flashdrive and is fully registered. Your USB drive contains 2 software programs, Flip-Q for teleprompting and PowerFlip for using a PowerPoint presentation with a teleprompter.

To run either program insert the USB drive into an available USB port on your computer. Browse to the window called "FlipQ Pro" which shows the contents of the drive.

Click on the TV icon labeled "run" to run FlipQ if you are teleprompting with text.

If you are prompting using PowerPoint, click on the monitor icon that says "RunPowerFlip".

Note that the software has been encrypted on the Flashdrive and cannot be copied to your computer or another flashdrive.

For operating instructions refer to the Help Files under the HELP MENU within the software. There is also a PDF of the manual that you can print out.

On-line tutorials for Using Flip-Q and setting up your computer are at www.q-gear.com/support.htm.

WARNING: Attempting to move files from the USB drive to another medium will corrupt the integrity of the software packaging and will cause your Flip-Q software to stop functioning properly. The Flip-Q USB Software version is only functional if it remains on this USB drive.
